February 2, 2017

Dear Parents,

The government is observing February 9, 2017 as National Mass De-worming Day. As per the programme, children studying in all the schools in Delhi will be administered a chewable Albendazole tablet of 400 mg in class. We have been assured that the medicine is safe with hardly any side effects. However, before going ahead, we would like to get your consent. In case your ward is suffering from any disease or is under any medication, kindly let us know as such children would be exempted from the programme. In case the child is absent on 9th February because of some reason, he/she would be given the medicine on 15th Feb which is to be observed as Mop up day.

With warm regards,

Yours sincerely,

Abha Sahgal  
Principal
