

## Experiments ! Wonder ! Experience! Recycle ! Discover!

Students of the Junior School went on a scientific journey on 26th and 27th July. The children enjoyed the magic of magnets , learned about properties of air and water. They became scientists and conducted experiments . The responsible little citizens also learned to recycling waste .They visited the Planetarium to learn about stars and planets. Students also made charts on importance of hygiene. We hope this quest for knowledge and the joy of learning continues among these young students.
