

## Middle School gets a new Science Lab

The Middle School has got a new Science Lab after the vacations in which students can now undertake experiments and learn the concepts of science by being active learners in the lab. The lab is equipped to teach Physics, Chemistry and Biology and has 32 independent work stations for the students. It is also IT enabled. Students of the Middle School have already visited the lab to conduct experiments and are delighted with this new addition to the Annexe Block.
