The 3n+1 Problem (Collatz Problem)

Take any natural number, from which you derive a sequence of numbers according to the following rules.

If the number is even, the next number is half of it. If the number is odd, you have to treble it and add 1. This is the next number. Strangely enough this sequence always **ends with the number 1.**

1st example: The first number is 16.

Sequence: 16, 8, 4, 2, 1

2nd example: The first number is 15.

Sequence: 15, 46, 23, 70, 35, 106, 53, 160, 80, 40, 20,10, 5, 16, ,8 ,4 ,2 ,1

3rd example: If you begin with 77 671, you reach 1,570,824,736 as the biggest number. In the end you reach 1 after 232 steps.

Fun Corner

TheNumber 2997 Mr. Pfiffigknows a trick.

"Tell me three numbers with 3 digits without 0. I also tell you three numbers (below Underlined). If we add these six numbers, the result always is 2997."

Three examples:

724	166	111
+196	+456	+555
+732	+822	+888
+803	+177	+888
+267	+543	+444
+275	+833	+111
----	----	----
2997	2997	2997

Do you recognize Pfiffig's trick?

Did You Know?

Mathematics is full of fascinating facts and I can only give a small flavour of them here. I hope one or two of them will make you think "Wow!"

1. Language

George Bernard Shaw said Britain and America are "two nations separated by a common language", but did you know that this happens even in mathematics which is supposed to be a language all of its own. The differences aren't confined to spelling (as in centre/center).

	British	**American**	
	Maths	Math	I don't know how this came about but, unlike the next example, no-one I know in the UK uses the US form
	Soluble	Solvable	A specialized term in group theory
			I came across this one quite recently. The definitions are completely reversed:
	Trapezium trapezoid	trapezoid trapezium	Quadrilateral with one pair of sides parallel Quadrilateral with no sides parallel
	right-angled triangle	right triangle	
	sine rule	law of sines	A trigonometric formula for triangles
	Formulae	Formulas	The US version of the plural of formula is taking over rapidly in Britain
	billion = 10^{12}	billion = 10^{9}	In Britain this battle has been lost many years ago. A British billion used to mean a million million but its use for finance has ensured that the US thousand million has taken over. There were similar differences for trillion etc

There must be many other differences. Do you know of any?

An Interesting Fact

Π =3.2 By Law

In 1897 the General Assembly of the State of Indiana in the USA tried to pass legislation that appears to say that π is to be 3.2, though the Bill does not make it very clear. On top of that they had the nerve to try to get everyone else to pay royalties for this 'discovery'.

The Bill was referred to the House Committee on Canals, which was also referred to as the Committee on Swamp Lands! By chance a professor of mathematics happened to be present during a debate and heard an ex-teacher saying "The case is perfectly simple. If we pass this bill which establishes a new and correct value for π, the author offers to our state without cost the use of his discovery and its free publication in our school text books, while everyone else must pay him a royalty." Fortunately, the professor was able to teach the senators about mathematics and the Bill was stopped becoming an object for ridicule.
