Stargazing Activity

14th October 2022

Stargazing with a telescope is always mesmerizing and brings the thoughts alive as to “ how the stars look in a telescope”. To bring the experience live, students from class 12th organized a star gazing activity for students of the Learning Centre in the evening. Amritansh, a student from grade 12 got his telescope to show the stars (Jupiter) to the students. To gear up the students for the evening activity students had also planned some slide shows and painting the planets on a sponge ball during the morning hours which helped learning center students to form a connection with the evening activity. Overall it was an overwhelming experience for LC students to watch stars from the telescope.
